

RegMarks XT: a QuarkXPress 7.31 or 7.5 extension (Mac OSX) in order to generate a PDF compliant with the Medibel+ specifications.

WHAT IS REGMARKS XT?

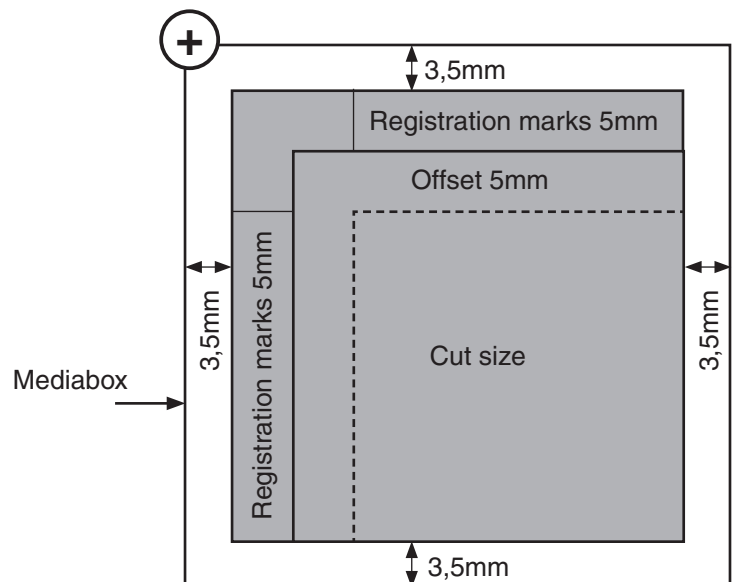

An extension which ensures the correct positioning of the mediabox in both QXP 7.31 and 7.5. Without this XTension a white space of 3,5mm is added around the mediabox. The Regmarks XTension allows QuarkXPress 7.31 or 7.5 users to create PDFs bearing the correct size (see picture 1).

! ATTENTION PLEASE: IN QUARKXPRESS 7 THE BEST OPERATING PROCEDURE IS VIA “EXPORT TO PS” AS OPPOSED TO “PRINT TO PS”, WHICH PREVIOUSLY WAS THE STANDARD PROCEDURE.

PICTURE 2 (without extension)

HOW TO INSTALL THE XTENSION?

- 1/ Unzip the downloaded zip file 'RegMarks_mac.zip'.
- 2/ Copy the extension 'RegMarks70.xnt' into the QuarkXPress 7 XTensions folder by way of Applications>QuarkXPress 7.2>XTensions.

- 3/ At the next launch of QuarkXPress, the XTension 'RegMarks70.xnt' will automatically load.
